HONEYCOMB TABLE TOPS

- Sandwich structure with steel honeycomb core
- 5 mm ferromagnetic stainless steel top skin with a pattern of M6 holes spaced by 25 mm
- Surface flatness  $\pm 0.1$  mm over any 1 m<sup>2</sup> area
- Laser Port (optional)

**Honeycomb Table Tops** provide the base on which precision optical and laser work is performed. The table tops have a honeycomb core inside.

The table tops meet high requirements for rigidity, flatness, vibration isolation and damping. We work constantly to improve the design, weight and cost-effectiveness of the table tops.

Standard Honeycomb Tabletop consists of a 5 mm thick cold-rolled stainless ferromagnetic steel top skin, and 3–6 mm thick bottom skin, both bound under high pressure to a honeycomb core, using a special epoxy resin. Thickness of the skin depends on the dimensions of the table top.

The top skin has a pattern (grid) of M6 holes spaced by 25 mm with  $\pm 0.1$  mm accuracy. It allows to make very quick experimental setups, and, at the same time, ensures a high level of precision and reproducibility. The surface of the top skin is ground to flatness of  $\pm 0.1$  mm over 1 m<sup>2</sup> area over the entire surface. The bottom skin is coated in a firm decorative coating.

Our standard honeycomb core is made of 0.25 mm corrosion-resistant plated sheet steel. A special composition of epoxy resin guarantees adhesion, rigidity, stability and damping corresponding to highest requirements.

The side-walls of the table top are made of a special acoustically hollow plastic which damps acoustic vibrations. The side-walls are covered in a decorative black leather substitute.

Upon request a Laser Port can be embedded in the table top allowing a laser beam to be let through the table (see the next page).

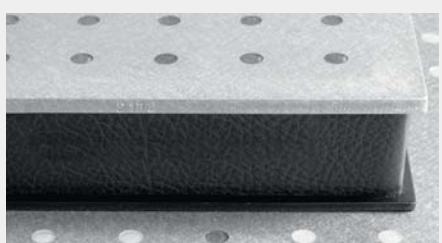

The Honeycomb Table Tops have been mechanically and acoustically tested by qualified specialists.

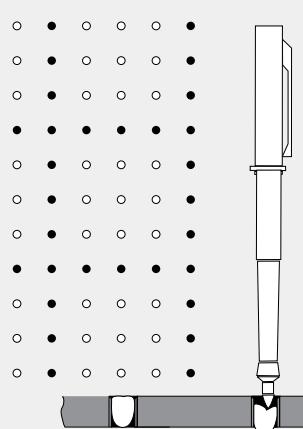

## THE CONCEPT OF CLOSED TOP HONEYCOMB TABLES

Real Closed Top – no way for liquids or tiny particles to get in.

There are only the holes you do use. Make "new" holes by yourself.

If You need a hole, clear it of the plug with a pencil or any similar item. Seal the no longer needed hole with the self-solidifying plastic mass again. In order to facilitate composition of optical schemes, we pre-set the plastic plugs of two colours, so that they form a coordinate grid with a mesh of 100 mm.

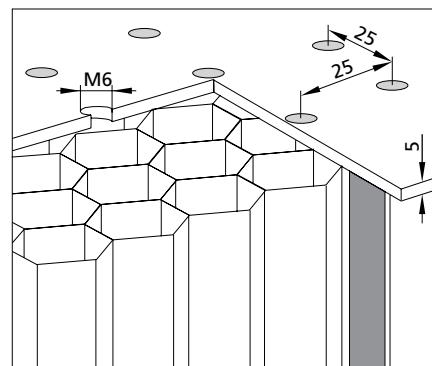

- Top skin 5 mm thick stainless ferromagnetic steel
- Honeycomb core of 0.25 mm thick steel has a density of 125–250 kg/m<sup>3</sup> depending on the cell size and its structure
- Top skin has a pattern of M6 holes spaced by 25 mm
- Flatness ±0.1 mm/m<sup>2</sup>
- Young's modulus 21×10<sup>5</sup> kg/cm<sup>2</sup>
- Shear modulus 8.2×10<sup>5</sup> kg/cm<sup>2</sup>
- Deflection under load 4 µm/m (100 kg centrally loaded)
- Resonant frequency approx. 200 Hz
- Transient excitation delay time 50 ms
